

OSA 5383-63

4 November 1963

MEMORANDUM FOR: Intelligence Division, OSA
SUBJECT : Request for Additional Information

In the 13 September issue of ELECTRONICS, the following paragraph appeared on page 19:

"TASS, the Soviet press agency, reports Russia has set up in Armenia automatically controlled two mirror radiotelescope of unsurpassed sensitivity. Each bowl measures 656.2 feet, Tass says, and can track moving objects for periods unmatched anywhere."

Would you be able to give us any additional information on this subject?
